ART385 Design Document for Interaction Design

The ART385 Design Document emerges from a few different sources, including traditional [software design documents](#) and interface design workflows. The idea is to convey a design and code structures that run along with it.

Re-state the Assignment

This assignment was to use the ESP32 to change visuals on the screen in Processing. Two outputs- a switch and a potentiometer were used to control shapes images and text.

Reflections

This assignment went okay, although I think I may have broken my potentiometer. I tried to test it using the SensorToSerial.ino which has worked every single time, but today it did not. Other than that, I am pretty okay without it turned out, although it is very basic.
